Are your servers getting out of control?

Maximize Your Business with Virtualization and Server Management Technologies

Managing IT systems can be time consuming and costly. Making your IT existing hardware do all that your business needs it to do can put a strain on existing resources and result in system slow-downs. You need tools to help you maximize the value of your physical servers, streamline processes, and save money. You also need peace of mind that your systems are up and running, costly downtime is minimized, and your sensitive data is protected. Enter: Microsoft virtualization and server management solutions.

The Value of Microsoft® Virtualization and Server Management Solutions

Get started with the benefits provided by the Windows Server® family and System Center management technologies.

1. Consolidate server resources to reduce complexity and improve overall server utilization.
2. Optimize IT productivity with the ability to manage your heterogeneous IT infrastructure through a single management console.
3. Reduce IT costs and risks by implementing easy-to-use solutions that keep your systems functioning properly and help keep sensitive data safe from threats.
4. Lower your total cost of ownership by reducing hardware requirements, as well as lowering power and cooling costs.
5. Increase reliability through interoperable solutions.
6. Provide secure remote access to applications or full desktop to mobile users.

> "To expand our services before, we would've spent a lot of time planning and budgeting for hardware. But implementing Hyper-V™ gave us a shortcut, and we expanded exponentially in six months."

Even if you only have a few servers, implementing Microsoft virtualization and management solutions can make a difference, helping lower administration costs and reduce server downtime. These solutions also make it easy for you to scale when you need to so that your IT always matches the needs of your business.

How Data Dynamix can help

Choosing the right virtualization and management solution for your business is too important to leave to chance. We are a Microsoft certified partner and Small Business Specialist with over 15 years' experience helping companies like yours select and implement virtualization and management solutions to help your business be even more successful.
